

Scoreboard controller app for LED boards, TVs & projectors

PRODUCT OVERVIEW

The scoreboard console is now an app.

DisplayScore turns a phone or iPad into a complete scoreboard controller for **any LED video board, TV or projector**. Plug in with an HDMI adapter or mirror wirelessly — the scoreboard appears on the big screen by itself while the device stays a full scoring console.

14 sports, purpose-built LED layouts, and a one-tap broadcast overlay for streamed games. No dedicated console, no wiring run, no training.

The soccer control screen on iPad. One screen runs the whole match — clock, score, possession, shots and cards — and drives the board at the same time.

What your board shows

actual panel pixels — also tuned for 288×144, 320×160 and HD screens to 4K

SOCCER 384 × 192 · P5/P6

Team colors, running clock, yellow and red cards, and an optional shots or possession readout — legible the length of a full-size pitch.

FOOTBALL 384 × 192 · P5/P6

Down and distance, ball spot, possession marker and timeouts left for each side — everything the sideline and the stands need.

What it does

Drives the big screen Auto-detects the display and pushes the board instantly. Reconnects itself after a cable blink or panel sleep.	Runs the game Clock, periods, timeouts, fouls, cards, sets and possession — with undo on every mis-tap.	Streams the score One tap adds a broadcast score bug to OBS, vMix or YouTube as a browser source.	Works without a board Board Mode turns the device itself into the scoreboard for table-top or mirrored use.

WHY CARRY IT

Every video board you sell needs a controller. DisplayScore removes the \$2,000–5,000 console line item from the quote, demos in under a minute, and ships with zero inventory and zero freight.

Demo units, review builds and co-branded catalog imagery available on request.
